

# MEDIA MANAGER

## A Digital Media Manager for eDOCS

This new application from Matrix Logic Corporation is a massive time saver for users of eDOCS DM who currently need to save their business photo images.

No more struggling with non-integrated image viewers. Now there is a fully integrated solution.

## Matrix Logic's Media Manager Organizes Your Digital Media in DM

A fully integrated windows application to allow the import, viewing, manipulation of photos, video and sound file in eDOCS DM.

### Features

This exciting new release has the following features:

- Collections of photos are imported into DM folders. The application prompts the user to create a new DM folder for the selected images. The pictures are profiled into this folder.
- Thumbnail extract. JPEG files with an embedded thumbnail will be extracted to a separate document attachment. This thumbnail will be used for fast viewing of a selection of files later.
- Opening a DM folder full of photos will display them all in a thumbnail list view. This allows fast review of the pictures.
- Double clicking will open a photo in full resolution for edit.
- Simple edit operations include Rotate, Resize, Crop etc.
- New thumbnails are automatically created for documents that do not have them, or for edited images. These thumbnails are also used by our MLC Thumbnails Add-on for DM.
- Save As allows versioning of photos in DM, including version comments.
- EXIF data view. When viewing a picture, you can inspect the hidden EXIF data.
- Import video and audio files into DM
- Video and audio playback from DM. Fully integrated.

Automatically adds thumbnails
